**THE JELLYFISH WITH A BROAD REACH**

*And God created great whales, and every living creature that moveth, which the waters brought forth abundantly, after their kind. – Genesis 1:21a*

Unlike most jellyfish, veilella does not merely drift with the wind. Veilella has a triangular sail. However, unlike some jellyfish with sails, veilella's sail doesn't simply catch the wind and move veilella along with it. Veilella's triangular sail has an S-shaped base so that it can stand up to winds from any direction. The sail is set on top of veilella's body at an angle to its length. This makes veilella a biological oddity – because its body is not symmetrical.

This asymmetry is not without purpose. The unusual body design of this jellyfish allows it to sail as much as 60 degrees off the direction of the wind. This is what sailors call a broad reach. What's more, veilellas can change their angle of sailing by extending or retracting their tentacles in the water.

When scientists noticed that veilella's body was asymmetrical, they immediately looked for a purpose behind the design. Even though many scientists will not recognize the Creator, they understand enough to realize that nothing in the creation is without purpose or design. So while many deny the Creator, they still recognize the pattern of His handiwork!

**Prayer:** Lord, even though some reject You, despite their great knowledge of the creation, they cannot deny the principles of purpose and design with which You have made all things. For this I glorify You. Amen.
